

ABSTRACT OF THE DISCLOSURE

The mounting structure of the junction box 1, in which an external wiring harness is connected to an internal electronic unit 5 through a busbar 30, includes: a terminal part 33 of the busbar 30; a housing member 50 for receiving the terminal part 33; a projecting piece 55 projecting from the housing member 50; and a cavity part 56 of the projecting piece 55, into which an electric contact part 36 of the busbar 30 is inserted; wherein the terminal part 33 is combined with the housing member 50 so as to form a connector part 3 to be connected to a mating connector of the external wiring harness and the electric contact part 36 is inserted into the cavity part 56 so as to correct the inclined electric contact part 36, thereby connecting the corrected electric contact part 36 to the electronic unit 5.
